

# Act report

This report briefly describes the insights and displays the visualizations produced from the wrangling data .

Before I could begin the analysis, the data had to gathering and cleaning data issues in quality and tidiness to ensure that it is complete, valid, accurate and consistent.

After cleaning many of the issues found during the assessment, there were about 1950 tweets are good to get insights from them

Some insights are supported with visualize chart and other are not,  
Let's review them

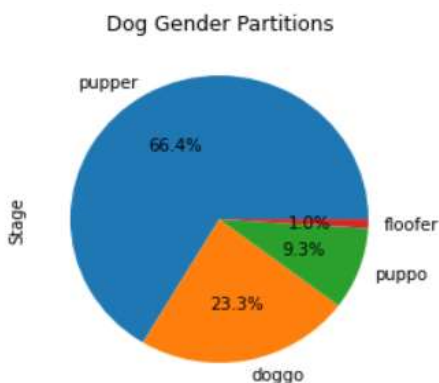

## Favorite Counts Are Higher Than Retweet Counts

One of the simplest insights was that ALL tweets have higher favorite counts than retweet counts.

## the most common stage

Pupper by far is the most common dog stage.

Puppies still tie for the lowest median rating numerator. Note that several categories have less than 10 posts (doggo-pupper, floofer, and doggo-puppo). Among the more common categories, doggo and puppo, puppies still underperform.

### Have the Ratings of WeRateDogs Been Consistent Through Time?

Besides being a positive rating platform, what does their ratings trend look like? This question is important because, it is important to know when this positive rating was started. If there is consistency in their ratings throughout the years, then they could be deliberately making their ratings positive.
